

## ALLERGEN CAPABILITIES

Agrifood Technology offers independent testing to the food and pharmaceutical industry, where we can assist manufacturers to verify their raw materials, processes and finished products. Test results can be used to ensure Food Standards Australia New Zealand (FSANZ) and regulations are met.

We report to the limit of reporting (LOR) based on technology and equipment within our laboratory, another option for clients is to report to the limit of detection (LOD). Please contact us for further details on which Allergens and specifications are best suited to your needs.

Agrifood Technology recommends customers to perform cleaning validation as part of their manufacturing process. This step is crucial to determine any presence of Allergens. We can provide swabs and rinse water to validate your processes.

We offer a range of Allergens using reliable and validated ELISA kits. The most common Allergens, are Gluten, Dairy, Peanuts, Crustacean, Egg and Soy. Please contact us for a full list of Allergens we currently offer.

Agrifood Technology recommends regular allergen testing to minimise risk and to provide our customers with confidence and ease of mind.

To find out more about Agrifood Technology and our complete Allergen testing range, please contact us to speak to one of our friendly staff.
